EDUCATION:

Area: «General Medicine»
Professional qualification: Physician

2014-2020

Kharkiv National Medical University Ukraine, Kharkiv

ABOUT ME:

I graduated from Kharkiv National Medical University in 2020. I studied there for six years. During this time I got interested in programming and since then this interest is getting bigger.

I have been working as a Front-End engineer in IT industry for over 3 years. My first step in this field was the successful completion of the pre-production program that lasted for 3 months. After this period I received an offer and worked there throughout the time. During this working period I participated in one big project where I successfully applied modern JavaScript (ES6, ES7), React.js library, TypeScript, React-testing library, Redux, Redux Saga, CSS Preprocessors(LESS, Sass, PostCSS), MaterialUI, StyledComponent, lodash, Bootstrap, Material UI, Redux Saga.

WORK EXPERIENCE:

Web Developer

Marketing Operating System	*JAN 2020 - Present time*
Customer	*US Customer*

A platform for marketing orchestration, data collection, omnichannel campaign activation, and optimization.

With respect to the requirements and objectives to be achieved, React.js was considered as the most appropriate front-end JavaScript library for this project development. However, forms in React are rather verbose; that is why we additionally used Formik, which is a simple and easy to use form library. Working on data tables, we applied React Table that enabled us to create a powerful datagrid experience, having total control over markups and styles.
Data exchange between front-end and back-end was provided with REST API, while Redux + ReduxSaga were used for data storage.

Responsibility:
- solving technical problems
- developing reusable UI components
- integrating UI components
- performing unit-testing of JS code

- task estimation

Skills:

Programming Languages/Technologies:
- Solid knowledge:HTML,CSS3, JavaScript(ES 5, 6, 7)
- React
- TypeScript
- CSS Preprocessors:LESS, Sass
- Libraries: jQuery, lodash, Bootstrap, Material UI, Styled Components,Redux, Redux Saga
- Task runners: Webpack, Vite
- React Testing Library

Developer Tools:
- WebStorm
- VSCode
- Postman
- Chrome Dev Tools
- Photoshop
- Figma
- Git(GitHub, GitLub, Bitbucket)

Methodologies:
- Agile, Scrum

Operating Systems:
- Mac OS X
- Microsoft Windows XP/7 -11
- Ubuntu

Languages:
- Ukrainian(native)
- Russian(native)
- English(upper-intermediate)
